Snippet1 Debug

Original code:

```
db = open("output.txt", "a")  
a = "Hello"+1  
b = "How do you do?"  
db.write(a+", "+b+"\n")
```

Debug:

1. Copied code and run in Pycharm
2. Code produced `TypeError: can only concatenate str (not "int") to str`
3. The second line of code is trying to add string with an integer, which is not allow in Python.

Fix:

1. Rewrite the line 2 as `"1"` so that it add 2 strings together.
